

Final Project Report and Presentation

Overview

Your report should give a complete description of the final result of your project. You should also write a summary that describes the major problems you encountered and changes to the design you made over time.

- A class diagram showing the hardware and software types.
- An object diagram of all components in the system.
- A state diagram for overall operation.
- A system-level test plan.
- Appropriate UML specifications for each module.
- Module-level test plans.
- A summary of design work: approximate total amount of time spent on the project; changes made during the course of the project; lessons learned.

You Should Turn In

A written report as described above.

A presentation in class:

- Summarize the purpose of the system.
- Describe the system architecture.
- Describe the operation of the most important components.
- Describe the major changes you made to your system over the course of the project.
- Describe the most important thing you learned during the project.
- If possible, demonstrate your project.
